Seamless computer to phone texting for Android devices

Texting should be simple. Why struggle to use a keyboard designed for mobile devices when you're not on the move? Your full size keyboard loves you, love it back.

- Easy as instant messaging from your computer
- No more clumsy touch screen keyboards
- No need to turn on or find your phone to check for messages

Full SMS inbox synchronization from phone to computer

With other texting solutions you will inevitably be switching back and forth from your computer to your phone, losing the context of your conversations. With CrossTxT all of your messages - whether they be sent from your computer, or from your phone - are instantly synchronized.

- Many devices, one inbox. The way it should be.
- Complete and realtime text message synchronization
- Messages sent from your phone or computer are instantly synchronized.

Your messages will never be lost when they are backed up on the cloud!

Like all electronic devices, phones are not perfect and can die without warning. Using CrossTxT, your text messages will not be lost.

- The control is in your hands: No, some, or full backup
- Full Privacy: We will never share any of your data
- Delete all of your data from CrossTxT, anytime you wish

We don't want our life public, security is key.

CrossTxT strives to keep all of your personal information safe and secure. All contacts and text messages are encrypted with AES-128 and can only be unlocked using your personal password. This means that nobody but you can read your messages!

- Always secure SSL connection to server with CrossTxT Gold
- All contacts and text messages encrypted with AES-128
- Only your personal password can unlock your messages
- We will never share your information to anyone
